

PARADOX STATE INTERNATIONAL LTD

Health and Safety Policy Statement

**Part 1: Statement of intent**

This is the health and safety policy statement of:

Paradox State International Ltd

Our health and safety policy is to:

provide and maintain safe and healthy working conditions for anyone working for or on behalf of Paradox State International Ltd; prevent accidents, injury and work-related ill health so far as is reasonably practicable; identify, assess and control risks arising from our work, including office work, remote work, travel, meetings, site visits, events, equipment handling and any product demonstration or installation activity; provide suitable information, instruction, training and supervision where required; consult with employees, freelancers and contractors on matters affecting their health and safety; use competent people and suitable contractors for specialist activities, including electrical, rigging, event production, laser/display or venue-related work where applicable; maintain safe systems of work for equipment, tools, displays, cabling, lifting, manual handling and transport where these are relevant to our activities; meet our legal duties under UK health and safety law and review this policy at least annually, or sooner if our work changes materially.

Part 2: Responsibilities for health and safety

1 Overall and final responsibility for health and safety:

The Director(s) of Paradox State International Ltd have overall and final responsibility for health and safety. They must ensure the company has suitable arrangements, risk assessments, resources and competent support for the work being undertaken.

2 Day-to-day responsibility for ensuring this policy is put into practice:

Day-to-day responsibility sits with the nominated responsible person for each work activity or project. This may be the project lead, event lead, site lead or appointed contractor, depending on the work.

Before work starts, the responsible person must confirm who is in charge, what risks are present, what controls are required and who needs to be briefed.

3 To ensure health and safety standards are maintained or improved, the following people have responsibility in the following areas:

Directors: legal compliance, policy approval, suitable insurance, contractor approval and final sign-off of higher-risk activities.

Project leads: project-specific risk assessments, site arrangements, briefings, supervision and incident reporting.

Employees, freelancers and contractors: following safe systems of work, using equipment correctly and reporting hazards promptly.

Competent external specialists: technical advice and sign-off for specialist work where required, including electrical safety, venue safety, rigging, laser safety or event production.

4 All employees, freelancers and contractors should:

- co-operate with supervisors, managers, project leads and appointed competent persons on health and safety matters;
- take reasonable care of their own health and safety and the health and safety of others who may be affected by their work;
- follow agreed risk assessments, method statements, venue rules and equipment instructions;
- avoid undertaking work they are not competent, trained or authorised to perform;
- report all health and safety concerns, defects, near misses and incidents to the appropriate responsible person.

Part 3: Arrangements for health and safety

Risk assessment

Project leads will carry out proportionate risk assessments before work begins. Assessments will cover office and remote work where relevant, travel, manual handling, electrical equipment, public interaction, events, site access, venue-specific risks and any specialist technical activity.

For higher-risk work, including demonstrations, installations, events, lasers, electrical systems, temporary structures, working at height or public-facing activity, written risk assessments and method statements must be produced and reviewed before work starts.

Controls will be communicated to everyone involved and updated if the work, location, equipment or personnel change.

Training

The company will provide or arrange suitable information, instruction and training for employees, freelancers and contractors where required for their role.

No one should operate equipment, drive work vehicles, handle hazardous equipment, supervise public-facing activity or undertake specialist technical tasks unless they are competent and authorised to do so.

Training and briefing records should be kept where the work involves meaningful risk.

Consultation

The company will consult employees, freelancers and contractors on matters that affect their health and safety.

Workers should raise concerns immediately with the responsible person, project lead or director. Health and safety concerns should be acted on promptly and recorded where appropriate.

Evacuation

For company-controlled premises or temporary work areas, clear emergency arrangements must be in place before work starts.

For client sites, venues, exhibitions or event spaces, all personnel must follow the venue evacuation procedures, fire alarm arrangements, assembly points and instructions from the site or event management team.

Emergency exits, fire routes, access routes and cable runs must be kept clear. Temporary setups must not obstruct evacuation routes or emergency equipment.

Additional practical arrangements

First aid and incidents

A suitable first aid arrangement must be identified for each work location. All accidents, near misses and dangerous occurrences must be reported to the responsible person and recorded. Serious incidents must be escalated to a director immediately.

Display screen equipment and remote work

Workers using laptops or screens for extended periods should set up their workstation sensibly, take regular breaks and report discomfort or recurring issues. Remote workers are expected to keep their workspace safe and free from obvious hazards.

Manual handling and transport

Avoid unnecessary lifting. Use suitable cases, trolleys and team lifts for heavy or awkward items. Loads should be packed securely for transport and checked before movement.

Electrical equipment

Electrical equipment must be suitable for the environment, visually checked before use and removed from service if damaged. Cables must be routed to reduce trip risk and protected where necessary.

Contractors and venues

Contractors must be competent for the work they perform and must follow site rules. Where required, insurance, method statements, risk assessments and technical documentation should be checked before work starts.

Laser, lighting or event equipment

Where the company is involved with laser, lighting or event equipment, the work must be planned by competent people. Controls should consider audience exposure, access control, emergency stops/interlocks, electrical safety, rigging, stability, weather/environment and venue approval where applicable.
